

**The screen seems to be too long. It cuts off at the bottom of the "Loss of Height" box and at just below the knees in the patient pictures. There is no way for us to scroll**

We are also having problems with the size of the screen. The screen seems to be too long. It cuts off at the bottom of the "Loss of Height" box and at just below the knees in the patient pictures. There is no way for us to scroll any further down the page.

For the purposes of using Posture Pro, change the resolution to 1024x762.

Also, set your taskbar to AutoHide. This frees up a lot of space at the bottom of the screen.
