

do you want to remove file TB105R.SKB error not a number

when I click on the posture pro icon I get an error asking me "do you want to remove file TB105R.SKB". I click no a few times and it opens to the program page but when I get in it says it cannot find the Book whatever and I when I press Start Program it says "error not a number"

SOLUTION:

We have seen this on some versions of Windows 8 and 10. It seems to be an privileges issue. The error does not happen if you right click on the Posture Pro icon and select Run as Administrator.
