

# Can't Find TB105RTM.DLL

When opening Posture Pro you get an error "Can't find TB105RTM.DLL" do the following.

Open the folder C:Program Files (x86)/Common Files/ToolBook/TBSystem and make sure there are files in that folder and that TB105RTM.DLL is NOT there.

Posture Pro depends on a number of files to open and run. I have assembled these files for you to download and install. This should get you back to normal. Watch carefully to make sure nothing tries to block the installation.

[www.posturepro.com/neuron105.exe](http://www.posturepro.com/neuron105.exe) is the link to use.

Either an antivirus or spyware scan has tagged that file as malware (it is not) or a Windows update has removed it.
